## Major Defense Contractor Makes SMART Move

*AssetSmart, the leader in global asset management software, announces that the world's third-largest aerospace and defense company has licensed AssetSmart software to be deployed across its global enterprise.*

“This organization is at the forefront of global technology leaders taking a next-generation approach to true Asset Management,” commented Phil Chase, chairman of AssetSmart. “By deploying our solutions across its global enterprise, the organization gains control of its critical assets, improves overall utilization, enables adoption of best practices and significantly reduces operating costs.”

Of particular significance to the AssetSmart deployment are the following key elements:

- ▶ AssetSmart is the first single-instance application deployed by the organization that will be accessible by all business units throughout the enterprise. Using AssetSmart's Partition Security functions along with powerful Global Security infrastructure, the database will be segmented and secured to meet the company's critical requirements. The advantages of a single repository for all asset information include consistent business processes across the enterprise, improved opportunities for strategic redeployment and total corporate asset visibility, streamlined management

**Phil Chase**  
Chairman and CEO

reporting, and significantly lowered deployment and support costs.

- ▶ AssetSmart will be used to manage all classes of assets across the enterprise, including government property, company equipment, leased equipment, IT assets, and special tooling. SMART/PEMS will act as the primary repository of asset data, and is supported by feature modules for Maintenance Activity Tracking, UID Registry uploads, PMO/Shipping including automatic generation of the DD1149 form, Advance Equipment Management for equipment pools, check-in/check-out functions and cost allocation computa-

tions, and automated PCARSS file generation.

- ▶ AssetSmart will be integrated with a variety of other internal systems, including SAP financial and procurement modules, to provide additional contextual data to asset records along with appropriate asset information back to the financial systems. Using a combination of real-time and batch interfaces, complete information will be available to users when needed, as needed.

As always, AssetSmart will also provide technical services, training and help desk support as part of the total solution. □

AssetSmart's SMART/PEMS web browser interface can be personalized to meet your company's unique requirements.

# SMART/PT Tracks Packages from Receiving Dock to Delivery

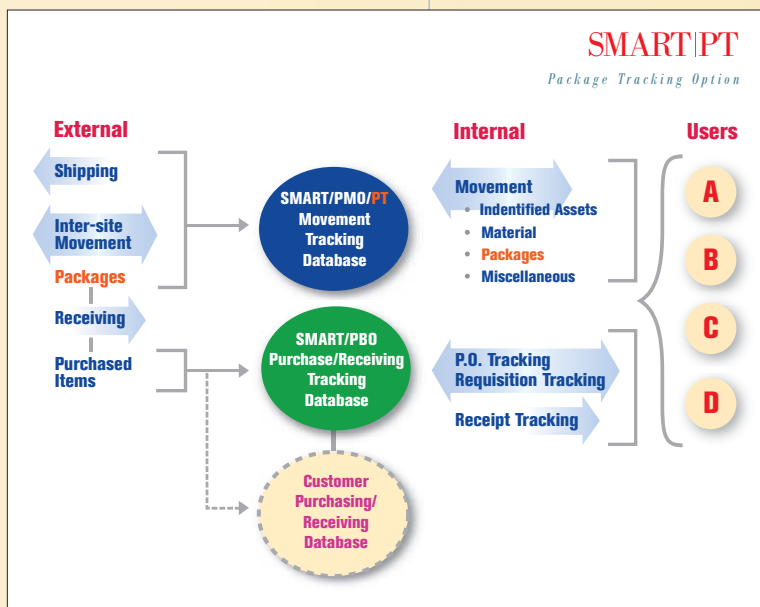

*Where is that important package delivered to your receiving dock this morning? It could be important documents, required parts, or any of a number of items critical to your company's success. You may have seen notification from your carrier that it was delivered, but where is it now? That is the answer that SMART/PT provides.*

AssetSmart, working closely with a pilot customer who processes over 400 packages per day through its receiving dock, has developed a new module for internal Package Tracking – SMART/PT. Whether you want to use it as a standalone application or integrate it into an AssetSmart suite, SMART/PT provides both users and operational staff the ability to closely track and monitor the movement of packages from dock to delivery. The database captures all events as the package moves through your organization and is delivered to the addressee. Additional capabilities include the ability to use handheld scanning and communication devices to capture real-time delivery

data, and capture of the package tracking data prior to receipt at your dock from sources such as UPS and FedEx.

AssetSmart's SMART/PT minimizes unproductive phone calls to the receiving group, provides instant access to the current status of your incoming package, and maintains an audit trail of all package deliveries internally. □

**For more information about SMART/PT, call your AssetSmart representative today.**

AssetSmart's new SMART/PT module enables business managers to track the movement history of every package from receiving dock through final delivery.

## PEMS Users Group Meeting Now!

Rick Shultz, the Asset Manager at the Johns Hopkins University Applied Physics Laboratory, has graciously agreed to be the Interim Chair of the AssetSmart Users Group. Rick has been associated with other users groups and he cites several benefits to being an active member:

- ▶ You gain a better understanding of the AssetSmart applications
- ▶ You identify process changes/improvements
- ▶ You have input when changes in the product are identified and the team presents the changes as a united group

The goal for this group is to share your knowledge and use of the AssetSmart product with the expectation of improving the management of your assets. If you would like to either become part of the Users Group or identify someone to represent your organization, please, contact Rick Shultz at 443.778.5585 or Richard.shultz@jhuapl.edu. □

## New Maintenance Activities Tracking Available for SMART/PEMS

AssetSmart is now offering a new feature option for SMART/PEMS users. The Maintenance Activity Tracking (MAT) option enables customers to integrate maintenance tracking directly with the assets in your SMART/PEMS software. This new offering allows organizations to view maintenance history, track when maintenance services are due and set up a maintenance schedule. Enhancing overall visibility into asset care and maintenance of critical assets, MAT ensures that companies are in compliance with FAR requirements and eliminates redundant systems.

The new MAT option is a subset of AssetSmart's powerful SMART/MMS Maintenance Management System and its SMART/CMS Calibration Management System—the most robust and highly-evolved enterprise calibration management system available commercially. If your organization requires more extensive maintenance and calibration management, be sure to ask about our SMART/MMS and SMART/CMS products. □

# AssetSmart Unveils Quick-Comply™ Solution for Federal Contractors

*With the FAR rewrite now published, and UID firmly part of future asset management considerations, AssetSmart introduces a comprehensive bundle of software and services enabling federal contractors to comply with new regulations quickly and cost-effectively.*

Based on the tried-and-true SMART/PEMS property and equipment management module, federal contractors can quickly meet the new FAR Part 45 requirements and adopt a powerful software solution that employs best commercial practices for the management of government-owned property. The Quick-Comply bundle includes SMART/UID for automated upload of compliant files to the UID Registry and SMART/PCART for tracking assets in the disposal process and automatic generation of a PCARSS-compliant data file. Contractors who manage government-owned material can also license SMART/TMAS which supports best practices for material management, is UID compliant, and is fully integrated with SMART/UID.

Also included in the Quick-Comply package is a set of services for quickly installing, configuring,

and implementing the solution. Depending on requirements, AssetSmart can have an organization up and running in as little as 45 days, enabling rapid compliance and substantial savings over competing solutions. If an organization requires label printing and scanning solutions, AssetSmart's partnerships with leading vendors such as Zebra Technologies and Symbol/Motorola provide a turnkey solution to meet those needs. □

**For more information on Quick-Comply, contact Brian Thompson at 310-450-2566 or [brian.thompson@assetsmart.com](mailto:brian.thompson@assetsmart.com).**

## SMART/UID Enhancements Simplify Compliance

AssetSmart released its second generation of SMART/UID further simplifying the process of managing assets under the DOD UID Policy.

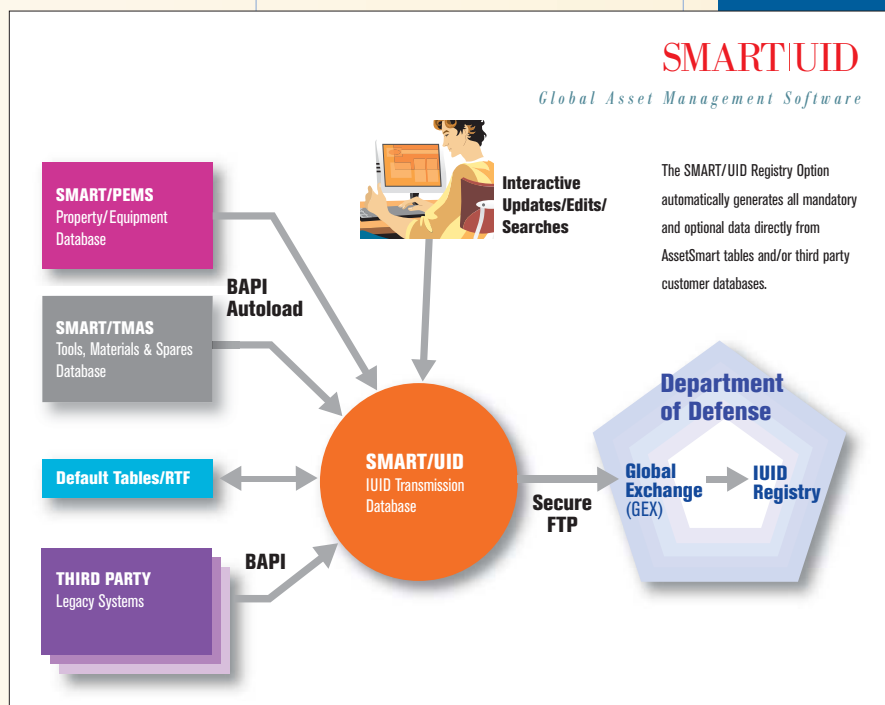

Building upon the robust functionality in the 3.5.1 release, SMART/UID leads the market in ease of use and integration with both AssetSmart modules and external legacy applications. A newly-designed method for capturing eligible assets for UII creation and upload enables a one-button push for importing asset data into SMART/UID, even from external systems. In addition, new functionality for automatically posting the complete data file to the UID Registry has been implemented. Improved navigation controls, menus and screens are also part of the new release.

As with all AssetSmart modules, SMART/UID can be deployed as a standalone

application or operate as an integrated part of the AssetSmart suite for global asset management. □

**For more information or a demo of this powerful solution, contact an AssetSmart representative.**

Latest release of SMART/UID leads the market in ease of use and integrates with other AssetSmart modules and legacy applications.

# With **AssetSmart** You Don't Need An Army of Consultants

AssetSmart was designed from the ground up so you can quickly install and configure your new system yourself—without the need to hire expensive consultants. Our software comes with powerful migration tools, flexible business rule decision tables, utilities for integration with external systems, and extensive data validation tables—all of which are easily implemented by your own staff. And if you need us, our experts are always available to assist you with your unique needs—and we'll continue to support them under maintenance.

*Quick, easy, powerful and reliable.*

## AssetSmart Adds New Manager of Client Services

**A** AssetSmart is pleased to announce that Billy Kang has joined the company as the Manager of Client Services and Technical Support. In this role, he will be providing client support for all technical issues and managing the client support staff to maintain and improve our high levels of customer satisfaction. He will also

be actively involved in the development and execution of new strategies for client support operations.

“As an enterprise technology company, AssetSmart recognizes that our software is only as good as the support we provide when our customers encounter new situations or technical issues,” said Christopher Campbell,

President and CEO of AssetSmart. “Billy will be an instrumental part of our team as we expand our client services division over the coming months.”

Prior to joining AssetSmart, Billy spent nearly 10 years providing customer support for enterprise applications for Toyota and Honda. □
